

Corrosion Under Insulation (CUI) is a localized corrosion on the external surface of insulated equipment caused by trapped moisture, often unnoticed until it leads to equipment failure, downtime, and costly repairs.

Solution

CorrosionRADAR can remotely detect, monitor & predict CUI on the asset through its IoT platform of a combined moisture and corrosion sensing system.

How it works?

Deploy ➤ System Installation

Monitor ➤ Remote Monitoring

Predict ➤ Risk Analytics

Act ➤ Inspect & Repair

CURRENT PRACTICE Reactive

Unique benefits:

1. Data coverage
2. Flexible configuration
3. Decision support

CR Node (electronics)

ATEX/IECEx Certification	II 2 GD Ex db IIB+H2 T3-T6 Gb Ex tb IIIC T85°C - T150°C Db
Ingress Protection	IP66
Power Source	Mains (24 VDC) / Long life Battery
Temperature Range (°C)	- 20 to +60 °C
Communications	Wireless: Wi-Fi/Cellular/WirelessHART/LoRa Other options: USB
Approx. Dimensions (mm):	284H X 245W X 169D (Without Antenna)
Approx. Weight	11.2 Kg

Sensors

Sensors Types	Corrosion Moisture
Sensor Length	up to 100m
Temperature Range	-190 to +300 °C

Optimise CUI Inspection Program (reduce cost & risk)
